Student Education Program Annual Report 2020-2021

After several months of distance learning under our belts, the CWS education team refined virtual programming and hands-on tools to support learners and teachers. Some content was brand new and some was reimaged. In all cases we strove to provide material that was relevant, useful and that we can leverage post-pandemic. In spring we resumed limited in-person activities and will continue to balance these opportunities as well as implement lessons learned during distance learning.
